Southern infill drilling program completed. Consultant engaged to undertake progression to Mineral Development Licence

Perth-based coal exploration company, East Energy Resources Limited (East Energy) (**ASX:EER**) has now completed the additional infill drilling program in the southern portion of the Blackall tenement (EPC 1149) QLD. The coal core samples have been sent to the lab for quality testing and the results of this program should enable Xenith Consulting to finalise the last stage of the JORC compliant Resource assessment.

East Energy has engaged a specialist consultant to assist with the application for a Mineral Development Licence (MDL) over the Blackall Coal Resource. The application will be lodged as soon as practical once the JORC Resource assessment is received.

“We are pleased to have completed the final stage of the southern infill drilling program. A considerable amount of exploration work has been undertaken over the past few years to enable us to be in a position, in the next few months, to apply for an MDL. Obtaining an MDL over Southern portion will be an important milestone for EER as it eliminates the need to relinquish sub-blocks within the MDL area” said Mark Basso, Managing Director of East Energy. We will now continue with drilling, aimed at completing a JORC Inferred Resource assessment, in the Northern part of EPC 1149.
