## **Exploration Drilling commenced at Capella**

Perth-based coal exploration company East Energy Resources (East Energy) has commenced exploration drilling at their prospective Capella Coal Tenement (EPC 1066), in the Bowen Basin in Queensland.

Due to the lack of historical data, on the east to west lower portion of EPC1066, a fairly sparse drilling program was recommended by the Exploration Manager, Peter Tighe.

The results of this initial drilling program will provide the necessary information required to determine whether or not additional drilling is warranted.

Upon completion of the Capella drilling program, we will refocus our attention on our Blackall Coal tenement (EPC 1149), with exploration drilling expected to commence on the Northern top half of the tenement, as soon as practicable.
